SUMMARY

- Dedicated, **team-oriented** and **frontend-focused** Full Stack Engineer with 6+ years of experience and solid knowledge in Javascript, React, Typescript and NodeJS.
- Previous accomplishments include building 2 web services which 3x increased customer support KPIs like Average Handle Time and First Response Time for the customer support team at Techmobil.
- **Handled 70% of all support/legacy tickets**, stabilizing client retention, accumulating large knowledge on the company's products and guaranteeing base revenue to run for 2023 at NameCoach.

WORK EXPERIENCES

Full-Stack Engineer - **Madureira Tecnologia** - Remote (US)   *Jan 2024 - Current*
- Complete development and maintenance of Content Creation API in Python/ChatGPT to create entirely narrated and illustrated videos with just a few inputs. The videos are also automatically uploaded with metadata to Youtube.
- System design and software development consultancy as freelancer for multiple projects across retail, mining, healthcare and government industries.
- Bootstrapped and delivered applications in production for top companies in Brazil like Via Varejo, Superior Industries, Hospital Santa Joana and Rede Nacional de Pesquisa using React, Typescript, Node, Material UI and Unit Tests.

Front-End Engineer - **NextRoll** - Remote (US)   *Mar 2021 - May 2022*
- Designed and implemented marketing technology for ads campaign management, end client geotargeting, media upload and budget allocation, helping NextRoll achieve $250 million revenue in 2021/2022.
- At the Platform team, refactored and grouped 3 different front-end services into one scalable monorepo, reducing load time in 5 critical pages from 3 seconds to less than 150 milliseconds using React, Typescript, Redux, CSS3 and Unit tests.
- Collaborated with development and maintenance of more than 30 internal npm packages like utility tools and UI components, even including a design system that had more than 7.000 weekly downloads.

Lead Front-End Engineer - **Kumulus** - Campinas (BR)   *Jul 2020 - Feb 2021*
- Lead developer for supply chain platform modernization working with architecture design, sprint planning, code review, pair programming and developer mentorship.
- Launched a ready-to-production data visualization dashboard for stakeholders, decreasing the time to elaborate new reports by 63%, by updating the platform using React, Next JS, Node and AntD design system.
- Created an interview kit, assessed candidates seniority, collaborated with HR to shape a new hiring process and conducted interviews to assemble the 5 front-end engineers team for this specific project.

EDUCATION
- **Associate's degree in Computer Science** - Anhanguera Educacional   *2023/2025*
- **Technical degree in General IT** - IFBA Instituto Federal da Bahia   *2012/2013*
